# METHODS, SYSTEMS AND COMPUTER PROGRAM PRODUCTS FOR DETERMINING A POINT OF LOSS OF DATA ON A COMMUNICATION NETWORK

## Abstract of the Disclosure

Methods, systems and computer program products are provided which may provide for determining a point of loss for data records to be communicated between a source and a destination on a communication network. A topology of the communication network between the source and the destination is determined which includes a plurality of connecting nodes. A number of data records from the source directed to the destination passing between ones of the connecting nodes during a determined period of time is monitored. At least one of the connecting nodes is identified as the point of loss based on the monitored number of data records and the determined topology.
